C. E. D I X O N
CHIEF ADMINISTRATIVE OFFICER

TO THE STATE DIRECTOR OF AGRICULTURE
THE HONORABLE BOARD OF SUPERVISORS
THE CHIEF ADMINISTRATIVE OFFICER

Gentlemen:

In accordance with the provisions of Section 65.5 of the Agricultural Code, herewith is submitted the 1961 Agricultural Crop Report for Stanislaus County.

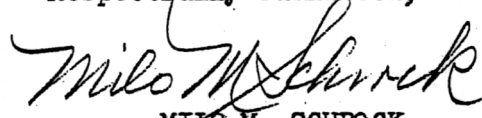

This report shows the bearing and non-bearing acreage of the permanent crops (fruits, nuts and grapes). A complete new survey has just been completed, however the new figures are not being used as they do not include the acreage pulled last fall which produced a part of the crop here reported. Also the tabulation of the figures are still incomplete at this time.

The figures used in this report represent gross income from production and not the net income to the producer. To get the net income the cost of producing and packing must be deducted.

In studying this report it will be noted that poultry and poultry products are now the leading industry in the county. Also, it will be noted Stanislaus County again produced a larger gross agricultural income in spite of three consecutive dry years.

We wish to express our appreciation for the cooperation and assistance of various agencies such as irrigation districts, cooperatives, local business concerns, producers and others who have made this report possible. Especially the members of the Agricultural Extension Service Staff and the Agricultural Commissioners Staff.

J. VERNON PATTERSON
County Director of Extension

Respectfully submitted,

MILO M. SCHROCK
County Agricultural Commissioner

FIELD CROPS

Alfalfa - - Acreage decreased slightly due to prospects of the third dry year in a row. Prices were down slightly resulting in a small decrease in gross income. Aphids were not a serious problem, and control measures were not required until late in the season. Over-all it was a poor year with much of the hay remaining unsold.

Dry Beans - - Generally it was a good year for beans with an increase in total acreage and favorable prices, except for blackeyes. Yields were much the same except for blackeyes and small limas, which showed a small decrease.

Blackeye acreage was up about 18%, yields and prices were down, resulting in net decrease in gross revenue of about 12%.

Baby lima acreage increased about 20%, yields slightly down, but prices somewhat better resulting in an increase in gross income.

Large lima acreage increased. Production was stable, prices were slightly better and gross income was up.

Green lima production was up about 10% with better prices giving a much better gross income.

Grain - - All grain acreage was down, due in part to inadequate rainfall and prospects for another dry year. Barley yields and prices were down, gross income down. Oat yields down, prices up, and gross income down. Rice production and revenue down.

Field Corn - - Shell corn production dropped drastically the past year. Acreage decreased 50% with a small decrease in production. Gross income was down, silage acreage decreased slightly, but yields and prices remained much the same.

Cotton - - Although a small item, showed a more favorable production rate and a slight increase in gross income.

Irrigated Pasture - - Acreage increased slightly due to new areas outside the irrigation districts being brought under irrigation.

Sugar Beets - - Acreage increased from 2,850 to 4,775 acres. Yields and prices were down slightly but gross income increased almost to the million dollar mark.

Over-all field crops showed a decline in total gross income. This was probably due to prolonged drought conditions coupled with a shift in acreages on the west side to tree crops. The anticipated water shortage resulted in many acres of second crops not being planted. Two extended hot spells, June and August, were reflected in lower yields of most crops.

SEED PRODUCTION

Alfalfa - - Certified acreage was reduced again. Yields were not significantly better. Price was a little better, but gross income was lower. Common alfalfa fared a little better. The increase was in uncertified Lahontan and Moapa hay fields which were dried up for seed production in anticipation of water shortage late in the season. Price slightly better and gross income up some.

Peas - - Some acreage increase along with slight production increase, resulted in almost doubling the yield. Prices slightly lower still gave a favorable gross income increase.

Red Clover - - Acreage and production decreased, resulting in gross income 50% lower than 1960.

VEGETABLE CROPS

Tomatoes - - Cannery acreage up from 1960. Prices were much more favorable. A smaller acreage was planted to green shipping tomatoes. Prices were up slightly, altogether tomato income was up in spite of total acreage being lower.

Watermelons - - Watermelons again were much the same as in previous years. Acreage constant, prices a little better, yields about the same. Over-all income up slightly.

Cantaloupes - - Acreages down considerably. Yields were somewhat better, but prices were off enough to lower gross income.

Honeydews - - Acreages down slightly, yields and prices a little better. Income much the same as 1960.

Other melons - - Acreages down. Persian yields up a little. Other melons down a little. Prices on all varieties down, gross income down from last year.

Peas - - Acreages almost double those of 1960. Yields about the same. Slight increase in price resulted in almost 100% increase in gross revenue.

Spinach - - Acreages slightly lower. Yields up, prices slightly up. Total production about the same. Gross income up slightly.

Lima Beans Green - - Acreage up slightly, yields about the same with prices a little better. Gross income somewhat better. A good year for freezer beans.

Onions - - Acreage and yields were down. Prices a little better. Income down slightly over 1960.

Lettuce - - Further reduction in lettuce acreage. Prices down and yields up slightly. Spring lettuce has gone out in this area.

Peppers - - A considerable increase in bell and other pepper acreage this past year. Yields were down somewhat, but a favorable increase in price resulted in a substantial increase in gross revenue from peppers.

Cole Crops - - Cole crop production remains fairly constant, although acreages of different crops fluctuates somewhat. Prices were stable and production constant. Gross income fairly stable.

FRUIT AND NUT CROPS

Almonds - - Almond production was up over 1960. Although not as high as the record 1959 crop. Prices on the average were lower than 1960, but still good enough to bring the gross income significantly higher than last year.

Apricots - - Apricot production was down from last year. Yields were considerably lower, due to low production on new acreage coming into bearing. Prices were lower except on dried fruit resulting in lower gross income.

Bushberries - - Ollalie acreage and production more or less constant. Prices slightly better resulting in higher gross income.

Boysenberry acreage and production roughly the same as last year. Prices somewhat better. Gross income up slightly.

Grapes - - Grape income on the whole was much better than 1960. Raisin varieties were up in price and production except for golden bleached Thompsons. Market varieties were fairly stable. The big increase in revenue was due to increased prices paid for grapes for crushing.

Clingstone Peaches - - 1961 was a record income year for cling peaches. Total production was up and prices were very favorable resulting in a considerable increase in gross income.

Freestone Peaches - - Income from freestones was down from 1960. Yields were down some. Prices were slightly better, but over-all it was not too good a year for freestones.

Nectarines - - Nectarines showed a considerable increase in gross income. The heavy planting of newer varieties 4 or 5 years back is reflected in increased production of good quality fruit. Although prices were somewhat lower, total income was up over 100%.

Strawberries - - Strawberry acreage has gone up slightly again. Production slightly better, prices lower; over-all result a good increase in gross income.

Walnuts - - Gross income dropped off slightly. Production slightly better, but prices down enough to result in a net decrease in gross income.

Fruits and Nuts as a group accounted for a good share of the increase in over-all gross income.

LIVESTOCK AND POULTRY

Beef Cattle - - Inventory of cattle and calves on feed on January 1, 1962 shows a slight increase over 1961. Production was up about 2%.

Swine - - Hog numbers are still showing a slight increase. Prices were up a small amount reflecting in a small increase in gross income.

Sheep - - Further reduction in numbers continues. This is due to lower prices and less returns to growers.

Horses and Mules - - Shetland Ponies have shown quite an increase resulting in higher gross income. Horse production has remained fairly steady. Mules still remain very few in number.

Dairying - - Dairy inventory is down from 1960. Both market and manufacturing milk show increases in volume. Market milk showing the largest increase. Dairying is now second to poultry in Stanislaus County.

Poultry - - The Poultry industry ranks first in income for 1961, a position held by dairy industry for many years. Although prices were somewhat lower in 1961, gross production in most items was up. Gross revenue was up.
