C. E. D I X O N CHIEF ADMINISTRATIVE OFFICER TO THE STATE DIRECTOR OF AGRICULTURE THE HONORABLE BOARD OF SUPERVISORS THE CHIEF ADMINISTRATIVE OFFICER

Gentlemen:

We are pleased to present the 1963 Agricultural Crop Report as required by Section 65.5 of the Agricultural Code.

Again this year the report shows the acreages of bearing and non-bearing permanent crops. These include a tabulation of all new plantings and pullouts to January 1, 1964.

The values shown represent gross value of production and do not represent net income received by the farmers.

It will be noted this report shows the largest total value of crops and livestock ever reported in the history of Stanislaus County.

We wish to express appreciation for the cooperation and assistance of all individuals who contributed to this report and especially to the members of the Agricultural Extension Staff and the Agricultural Commissioners Staff.

Respectfully submitted,

VERNON PATTERSON Stanislaus County Director of Extension MIO M. SCHROCK Stanislaus County Agricultural Commissioner

#### FIELD CROPS

Alfalfa - - The 1963 season showed another slight decrease in acreage. Yields averaged slightly less but prices were considerably better, resulting in a considerable increase in gross income. There was no real pest control problems encountered for the year and the alfalfa picture looks much brighter.

Dry Bears - Total acreage declined slightly but over-all gross revenue was up. This was due primarily to increased acreage and prices for blackeyes. Small limas increased in acreage and yield giving an increase in gross income. Large limas declined in acreage, yields up slightly, price was the same. Gross income was down. Other beans (presumably freezer type green limas) decreased in acreage, although yields were better and prices slightly better, resulting in a decrease in gross income.

 $\frac{\text{Grain}}{\text{in acreage}}$ . Barley, rice and milo were down slightly in acreage. Wheat gained in acreage. Oats the same. Yields and prices fluctuating. Over-all gross income up.

<u>Field Corn</u> - - Shell corn acreage up 20%. Yield and price both better resulting in increase in gross income. Silage corn acreage stable. Prices slightly better, yields much the same. Over-all gross income was up.

Cotton - - Nearly a 50% reduction in acreage, coupled with a drop in yield, resulted in a considerable drop in gross income in spit of prices being better.

Irrigated pasture - - Decline in acreage continues. Rent stable.

Sugar Beets - - A better than 20% acreage increase, coupled with a better yield, resulted in a considerable gain in gross income in spite of a small decrease in prices.

Field crops over-all showed a sizeable increase in gross income in spite of a small drop in acreage. This acreage drop is due to shift of production to other crops such as orchards on westside. Generally prices and yields were more favorable in 1963.

#### SEED PRODUCTION

Alfalfa - - Certified alfalfa acreage nearly doubled in 1963. Production was better but prices were a little lower. Gross income from certified and non-certified varieties were up.

Peas - - Pea acreage declined some. Yield up slightly. Gross income down slightly.

Red Clover - - Acreage slightly higher. Yields up considerably. Prices somewhat lower, resulting in a 100% increase in gross income.

<u>Miscellaneous</u> - - Acreage down. Income per acre more favorable, but total gross income down.

#### VEGETABLE CROPS

Vegetable crops accounted for a small increase in total gross income. Acreage declined slightly but most prices were better.

Tomatoes - - Cannery acreage increased again. Yields were better but prices slightly lower. Total cannery income up from 1962. Green tomato acreage decreased. Prices were lower resulting in a decrease in fresh market income. Over-all tomatoes were down slightly in gross income.

<u>Watermelons</u> - - Acreage up, yields and prices down. Gross income down slightly.

Cantaloupes - - Acreage down, yield and prices more favorable. Gross income was lower than 1962.

Honeydews - - Acreage down slightly, yields and prices slightly higher resulting in a small increase in gross returns.

Other melons - - Persian acreage decreased, yields lower, price slightly better. Gross returns down 30%. Other melons were down slightly in acreage. Yields and prices were a little better resulting in a slight increase in gross income.

<u>Peas - - Acreage and yield nearly constant.</u> Prices a little better resulting in a slight increase in gross returns.

Spinach - - Acreage and yields down. Prices stable resulting in a slight decrease in gross income.

Lima Beans Green - - Acreage decreased about 1/3 from 1962. Yields slightly better but prices down. Over-all gross income lower.

Onions - - Acreage decreased 25%. Yields the same but prices were lower. Gross income down.

Lettuce - - Head lettuce acreage up about 50%. Yields stable, price a little lower but gross income up significantly.

Peppers - - Acreage about double 1962. Yields were better but prices lower because of shift of acreage from shipping to dehydrating usage. Over-all income up about 1/3.

Cole Crops - - Acreages up. Yields more favorable. Prices were more or less stable resulting in a substantial increase in gross returns.

#### FRUIT AND NUT CROPS

All tree fruits except olives show a large increase in acreage. This is due to new acreages reaching the bearing age. Apricots, almonds and walnut plantings continue heavy on the westside. This results in a drop in field crop and vegetable crop acreages from this area. Berry acreages continue to decrease. Fruits and nuts account for a considerable portion of the increase of total gross income for the year 1963.

Almonds - - Acreage and yield both increases. Prices were down some but total gross income was up.

Apricots - - Acreage and yield were up. Prices down. Gross income was still up due to increase in total production.

Bushberries - - Ollalie and blackberry acreage almost nil. Yields down, prices up. Gross income down. Boysenberries down in yield and acreage. Prices somewhat better, but gross income down.

Grapes - - Total revenue declined. The grape marketing order termination plus increase in yields forced prices down.

Clingstone Peaches - - In spite of predictions of a poor crop, cling peaches did well in 1963. Yields and prices were somewhat better. A considerable increase in gross income.

Freestone Peaches - - Yields and prices both better. Gross income up

Nectarines - - Fairly stable. Prices were a little better resulting in an increase in gross returns.

Strawberries - - Acreage again declined. Yields lower but prices a little better. Gross income down some.

Walnuts - - Acreage and yields up. Prices down. Some orchards had a lot of small nuts but over-all an increase in gross returns.

Pears - - Practically no crop for 1963. No fruit was set. Income very small. Included in miscellaneous for 1963.

#### LIVESTOCK AND POULTRY

Beef Cattle - - The industry continues to grow slowly but prices in 1963 were a little lower. Gross income fell slightly.

Swine - - Numbers stable in 1963. Prices a little less favorable. Gross income down.

Sheep - - Slight decrease in numbers in 1963. Prices a little lower. Gross income lower. Wool prices picked up for first time in 1963.

Horses and Mules - - The size of horse herds shows a steady increase. Prices stable. Gross income up slightly.

<u>Dairying</u> - - Milk cow inventory continues to decline. Market milk continues to increase but manufacturing milk decreases. Prices stable. Milk is still the number one income producer for a single item.

Poultry and Poultry Products - - Poultry income continues to increase. Turkey income was down slightly but chickens were up. Eggs continue their upward trend. Part of the increase in egg income is due to inclusion of hatching eggs for the first time in 1963.

1963 PERMANENT CROP ACREAGES - COMPLETED RESURVEY
